Full Stack Software Engineer with 2+ years of experience building production AI applications using Python, FastAPI, React, TypeScript, LangChain, Gemini, and AWS. Experienced in designing scalable REST APIs, LLM workflows, Retrieval-Augmented Generation (RAG), vector search, and customer-facing enterprise SaaS products.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, C++

Frontend: React, Next.js, Tailwind CSS, HTML, CSS

Backend: FastAPI, Node.js, Express.js, REST APIs, Selenium, BeautifulSoup

Databases: PostgreSQL, MongoDB, OpenSearch, Supabase, FAISS

AI/ML: OpenAI API, Gemini, LangChain, RAG Pipelines, Embeddings, Vector Search

Cloud & Infra: AWS (Lambda, SQS, EC2, S3), Docker, GitHub Actions (CI/CD)

Developer Tools: Git, Postman, Cursor, GitHub Copilot, Claude Code (daily AI-native workflow), VS Code

EXPERIENCE

Software Engineer

June 2025 – Present

Sonata Software Ltd.

Bengaluru

- Built **HRP fuzzy-matching engine** against watchlists, categorizing broker matches by NMLS ID and name into Exact Match, Possible Match, and No Match tiers, combined with a **LexisNexis PDF scanning pipeline** detecting bankruptcy, liens, and derogatory credit history for analyst risk review dashboards.
- Designed and built a **lead scoring pipeline**: call transcription feeding into **LangChain + Gemini** across 4 structured prompt chains (sentiment/intent, semantic/discourse, emotional metrics, conversation structure). It also includes a separate layer to score leads, which helps prioritize them.
- Implemented **score versioning** (version, total calls analyzed, call IDs snapshot) to recalculate scores incrementally when new calls were received, while ensuring past conversations were still taken into account.
- Built a **RAG-based document Q&A POC**, generating embeddings and indexing them in **FAISS** for similarity search, with **Gemini** powering grounded, context-aware answer generation over uploaded documents.

Software Engineer (Founding Team)

July 2024 – June 2025

QuickAds.ai

Remote

- Built the **ad search experience end to end**, with a FastAPI + OpenSearch backend reducing query time from **50s to 3s**, paired with a complete ad discovery interface with advanced filtering, sorting, and pagination that responds in less than a second across millions of ads.
- Designed an **ad ingestion pipeline** (EC2 scrapers to SQS to Lambda) pulling **10,000–20,000 Meta ads daily**, decoupling scraping from GPT-based analysis so ads appeared on the Discover page immediately, with error/status tracking and batch reprocessing for failed analysis jobs.
- Shipped an **automated creative analysis tool** used by **100+ customers**, replacing manual creative review with an LLM-based scoring pipeline for ad hook, structure, and thumbnail feedback, plus the full frontend workflow including upload flows and processing states.
- Built automated **competitor tracking across 200+ tracked brands**, detecting newly launched ads via a scheduled backend job and replacing an estimated **8+ hours per week** of manual monitoring with automated weekly email reports using Amazon SES.

PROJECTS

Midnight Mile | *Next.js, TypeScript, Google Maps APIs, ElevenLabs, Gemini, Supabase (PostgreSQL)*

- Built the full **Next.js frontend** with real-time map UI, route visualization, and safe zone overlays using Google Maps Directions and Places APIs, scoring routes dynamically based on crime rates, lighting, and foot traffic.
- Implemented **geofencing-based safety logic** on the backend – arrival detection, periodic ElevenLabs AI voice check-ins, distress keyword triggers, and automated emergency alerts to trusted contacts on no response.
- Designed multi-step onboarding flows, trusted contact management UI, and live walk tracking screens, wired to **Supabase (PostgreSQL)** for user data storage and **Gemini** for conversational rerouting.

AI Mail Assistant | *Next.js, TypeScript, OpenAI API, Gmail API*

- Built an AI-powered Gmail client translating natural language commands into schema-validated actions (send, reply, forward, filter) via **OpenAI Structured Outputs**, with OAuth-secured Gmail integration and retry logic for reliability.

EDUCATION

The LNM Institute Of Information Technology
Bachelor of Technology in Computer Science

Jaipur, Rajasthan
Aug. 2020 – May 2024
